

# COVID-19 VACCINES

## have arrived in First Nations across Canada

This document is a high-level summary of information on the COVID-19 vaccines. For more and up-to-date information, please contact your health care provider or visit the [Indigenous Services Canada COVID-19 webpage](#).

### What you need to know:

- COVID-19 is real and spreading across Canada.
- The Federal, Provincial and Territorial governments are responsible for vaccine distribution and delivery to all Canadians, including for First Nations.
- Health Canada has approved two vaccines (Pfizer and Moderna) currently being administered in Canada. Vaccines are expected to become more readily available throughout 2021.
- Both the Pfizer and Moderna vaccines require two doses, 3-4 weeks apart, to produce a 90% protection rate against COVID-19.
- The vaccines (Pfizer or Moderna) should not be interchanged for the 1<sup>st</sup> and 2<sup>nd</sup> dose. Use the same vaccine for both doses, either Pfizer or Moderna, or what is available in your community.
- Tens of thousands of volunteers participated in COVID-19 vaccine clinical trials (43,000 participants for Pfizer and 30,000 for Moderna). These trials have demonstrated the vaccines are safe and effective.

### Myth busting about vaccines:

- COVID-19 is not the flu. The seasonal flu vaccine will not protect you from COVID-19.
- You cannot be infected with COVID-19 from the vaccines.
- Pfizer and Moderna vaccines do not change your DNA.
- There are no microchips in the COVID-19 vaccines.
- The vaccines do not include antibiotics, adjuvants, thimerosal, latex or metals.
- Vaccines are not mandatory.

### When can I get the vaccine and where?

- Everyone who wants a vaccine will have access to one.
- Depending on where you live, you will be given the vaccine available to you at your local clinic site. You may be eligible soon, or you may have to wait a few months.
- All COVID-19 vaccines are free in Canada.
- Priority access to vaccines is being provided to those at greater risk of poor outcomes (e.g. seniors and elders; those living far away from access to health care services) or those who are more at risk of exposure (e.g. health care workers). This differs slightly between each province and territory.
- Individuals 16 years and older are approved for the Pfizer vaccine.
- Individuals 18 years and older are approved for the Moderna vaccine.
- Individuals who are immunocompromised, pregnant or breastfeeding are cautioned against receiving immunization and are encouraged to speak with their health provider.

### AFTER YOU GET VACCINATED:

- There may be local pain at the injection site, fever, chills or feeling tired after immunization. These are common reactions after vaccinations, and it means your body is responding appropriately to the vaccine. Ask your health care provider about any potential adverse reactions to watch for.
- Public health practices will continue even after you are vaccinated. Continue wearing a mask, handwashing or using hand sanitizer and keeping a 2-meter distance from others when away from your home.
